

Arta Audio Measurement And Analysis Software is powerful tool for professionals, students, and home users that help to control, analyze and perform advanced measurements of audio signals. It has wide range of built-in measurement functions like real-time spectrum analyzer with waveform viewer, waveform editor with integration to 3D sound editing software OctaneRender, Linear Prediction coding tool for PCM/ADC/DAC measurements. The program runs on Windows 7 or higher operating system only. ARTA is updated regularly with new features, bug fixes and improvements including support for the 2017 version of Logic Pro X which was released in October 2016. The first public release of ARTA was in August 2009 and since then many upgrades and version changes were released. There are also unofficial builds for other platforms available, such as Mac OS X and Linux. The main parts of the program are: Main features:

Arta Audio OctaneRender Plugin for 3D artists (ARTA 1.1 only)

Arta Audio Measurement And Analysis Software is provided as standalone installer or portable version that can be run without installation. It supports different language localization, including Russian and English (more than 80 languages available). Supported Windows 7 and higher (Windows XP and Vista are not supported). ARTA Audio Measurement And Analysis Software 1.8.2 has been released on 23 March 2018.

Unofficial builds of ARTA Audio Measurement And Analysis Software 1.8.2 for Mac OS X and Linux are available to download from several unofficial sites that provide updated versions. These include:

Also, modified/customized versions of ARTA Audio Measurement And Analysis Software have been released by users of the original program to add additional functionality, such as VST plugin support or a graph editor.

ARTASurvey is a separate program that provides multi channel audio measurement tools for professional use, including the ability to perform channel-based loudness measurement according to EBU R128 or ITU-R BS.1770 standards. It is compatible with ARTA Audio Measurement And Analysis Software, can be used in combination with ARTA for specific tasks ranging from simple audio analysis to advanced audio testing and compliance measurement. ARTASurvey includes software plug-in component based architecture that allows its users to create or use additional plug-ins that can extend functionality of ARTASurvey software, include support for proprietary file formats, embedded metadata extraction and processing. It is available in different languages, including Russian, English, Spanish, Portuguese. ARTASurvey 2.0 was released on 19 January 2017.

ARTACalculator is software application specifically designed for audio level metering with linearity correction based on ARTA Audio Measurement And Analysis Software technology. It has both linear and logarithmic scale modes for easy channel-based loudness measurement according to EBU R128 or ITU-R BS.1770 standards. ARTACalculator can be used as an additional channel metering tool for ARTA Audio Measurement And Analysis Software or as a separate measurement program.
